EDUCATION

McMaster University

Bachelor of Science in Computer Science — Dean's Honour List

Hamilton, ON

Expected Graduation: Apr 2028

EXPERIENCE

Software Developer Intern

Mar. 2026 – May 2026

EventSystemPro

Remote

- Modernized a 1M+ LOC legacy PHP event-management platform for PHP 8.x, upgrading core CMS, framework, and 200+ generated event-controller code paths across 3 production systems serving over 50,000 users.
- Modernized a legacy Stripe integration for PHP 8.x, adding checkout-locking safeguards to eliminate duplicate payments in the protected payment flow while extending promo-code support across payment and invoice workflows.
- Resolved 5+ critical email-flow defects across registrant, membership, and contact-manager workflows, fixing sender/reply-to logic, multi-recipient parsing, and template edge cases in active cPanel-hosted deployments.
- Integrated an AI-assisted rich-text editor into legacy CMS workflows, cutting content-authoring time by 80%+ in internal testing while modernizing outdated WYSIWYG editing paths.

Freelance Software Developer

Aug. 2025 – Dec. 2025

Private Therapy Practice

Hamilton, ON

- Enabled non-technical content updates by integrating Strapi CMS into a React and Tailwind CSS site, eliminating manual developer edits.
- Led a 3-person development team, introducing GitHub branching and pull request workflows that reduced merge conflicts and cut average review turnaround time by ~30%.

Software Developer

Jan. 2025 – May 2025

Finest Finish

Hamilton, ON

- Implemented regex input validation, cutting invalid form submissions by 85% and improving data reliability.
- Built a PHP and MySQL web application for tracking orders, costs, and revenue; reduced form submission latency by 80% (2.5s → 0.5s) via asynchronous JavaScript requests.
- Developed D3.js visualizations to surface order, cost, and revenue trends, reducing manual spreadsheet-based analysis for the client.

AI Model Trainer & Prompt Engineer

Oct. 2025 – Present

AfterQuery (YC-backed)

Remote Contract

- Created original prompts and high-quality model responses for AI training tasks, evaluating and rewriting AI-generated outputs to improve clarity, instruction-following, tone control, and human-like editorial judgment under strict formatting, QA, and evaluation constraints.

PROJECTS

MusiWrite | *Python, Flask, Spotify API, Ollama AI*

- Built a Flask application that translates free-form user text into Spotify playlists by extracting mood and scene attributes via LLM inference.
- Implemented local LLM inference using a quantized 7B model via Ollama, eliminating third-party API costs while preserving user data privacy through offline processing.
- Designed playlist aggregation logic using the Spotify Web API, combining tracks across multiple sources while enforcing mood consistency and avoiding repetition.

Interactive 3D Portfolio Website 🌀 | *React, Three.js, React Three Fiber*

- Optimized 3D asset delivery, slashing load time by 88% (30s → 3.4s) via lazy-loading meshes and texture compression.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL (MySQL, PostgreSQL), PHP, C

Web: React, Tailwind CSS, Flask, Node.js, Express.js, Next.js, Three.js, RESTful APIs

AI / NLP: Ollama (LLMs), Hugging Face Transformers, prompt engineering

Tools: Git, GitHub, Linux/UNIX, Apache (web server)
